TRIPOD ATTACHMENT – Conveniently carry your compact tripod on top of the Airport Navigator V2.

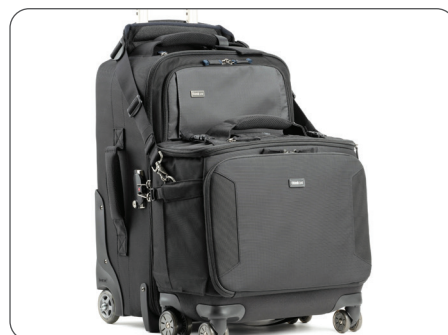

Step 1: Unbuckle the tripod straps on the top lid and loosen.

Step 2: Center the tripod on the top lid and securely fasten by buckling and then tightening the tripod straps around the legs.

PIGGYBACK SHOULDER STRAP – Use the included shoulder strap to conveniently “piggyback” the Airport Navigator V2 on the front of another roller.

Step 1: Position the Airport Navigator V2 in front of the other roller. Lengthen both straps so the shoulder pad reaches the telescoping handle on the other roller.

Step 2: Pull the telescoping handle up through the slot in the shoulder pad.

Step 3: Tighten both sides of the shoulder strap equally so they are under tension to the point where the Airport Navigator V2's smaller front wheels barely touch the ground.

RAIN COVER INSTALLATION

Step 1: Partially extend the telescoping handle and place the rain cover over the Airport Navigator V2. Fit the handle through the cutout, and then close the cutout using the hook-and-loop flap.

Step 2: On the bottom of the Airport Navigator V2, attach the two halves of the rain cover together using the hook-and-loop strips underneath the bottom grab handle.

LAPTOP SECURITY STRAPS

Use the laptop security straps for quick access to your computer while preventing camera gear from falling out.

The straps can be detached from the front lid and tucked away when not needed.

OPEN LID WORKFLOW

Access your gear quickly while shooting by extending the telescoping handle through the carry handle on the top lid.
